How can I do a search for these to detect more of them?The usual search function doesn't accept an enter character as a search character.. Here the formula is nested together:

=MID(A1,SEARCH(CHAR(10),A1),SEARCH(CHAR(10),A1,SEARCH(CHAR(10),A1)+1)-SEARCH(CHAR(10),A1)).. To find these, in the standard Find (or Replace) dialog, in the Find What field, use the standard method of entering ASCII character codes: hold down Alt and type (on the numeric keypad) the character code, i.. The mid() function can parse through multiple lines Let's say this address is in cell A1: Google, Inc.. It looks like this initially: If I hit F2 (to edit) then Enter (to save changes) on each of the cells with a newline (without actually editing anything), Excel automatically changes the layout to look like this: I don't want these newlines characters here, as it messes up data processing further down the track. Please find the steps for eliminating line breaks using Find and Replace: Select all cells where you want to remove or replace

carriage returns.. The first step is determine the position number of the two return characters The first return character is found at '13' with this: =SEARCH(CHAR(10),A1) The second return character is found at '36' with this: =SEARCH(CHAR(10),A1,SEARCH(CHAR(10),A1)+1) Now the second step.. Remove Carriage Returns manually Pros: the fastest way Cons: no any additional features:(. ae05505a44 [Plants Vs Zombies Download For Mac](#)
